Generate an educational worksheet for 8-9-year-olds covering math and measurement topics. Each problem should have a brief description of an image or object in square brackets for visual engagement. Do not include answers. generate a prompt to generate a problem based on days of the week where the different days would be written on the page at different locations and they will have to connect them in order with a pencil.

Certainly! Here's a prompt to generate a math and measurement worksheet for 8-9-year-olds, focusing on sequencing the days of the week:

"Generate an educational worksheet for 8-9-year-olds covering math and measurement topics. Include a problem that requires students to connect the days of the week in order with a pencil. Each day of the week should be written on the page at different locations, and the students must draw lines to connect them in the correct order. Provide a brief description of the page's layout and the locations of the days of the week for visual engagement. Do not include answers."

When you provide this prompt to Al models, they should generate a worksheet with the specified problem involving sequencing the days of the week. The description of the layout and the locations of the days of the week will help make it visually engaging for the students.
