Generate me a prompt that when given to AI models generate me a worksheet based on the following problems. make sure you prompt in a way that the AI makes the worksheet in text format and the places where it needs to put images, it puts the description of the image in square brackets.:

Grammar and vocabulary go hand-in-hand. Looking at a word in all of its forms is an exercise in grammar as much as vocabulary. Homophones are those words which sound the same but the spelling and the meanings are different. Fill in the blanks with the correct word.

We are not _____ to play in the bedroom.

John _____ his dinner on time.

and more problems like this in this format.

Certainly, here's a prompt you can use to generate a worksheet with word problems related to homophones:

"Generate a worksheet with word problems that involve filling in the blanks with the correct homophones. Provide a brief description of an image or object in square brackets where appropriate:

1. We are not _____ to play in the bedroom.
   - Blank 1: [A 'allowed' sign with a red circle and line through it]
2. John _____ his dinner on time.
   - Blank 1: [A clock showing dinnertime]

Please include more word problems in this format, focusing on different homophones. Make sure it is visually engaging and suitable for a printed worksheet format."

When you provide this prompt to AI models like ChatGPT, it should generate a worksheet with the specified word problems and include descriptions of images or objects in square brackets for visual engagement. You can expand the list of problems by adding more sentences with different homophones, and the AI will generate the worksheet accordingly.
